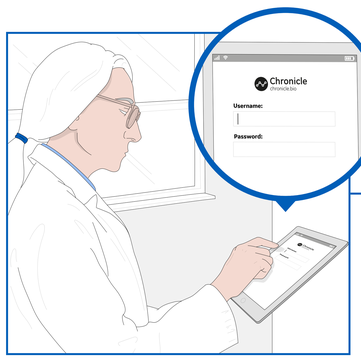
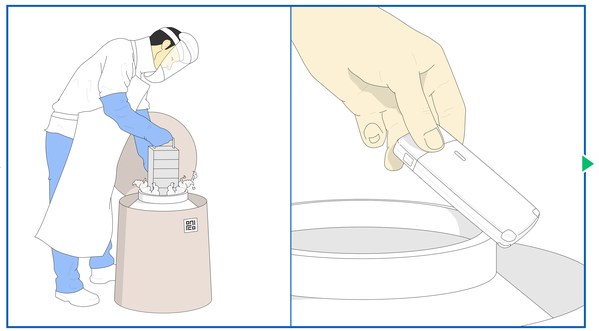
Integrate cell therapy logistics with manufacturing operations

Chronicle™ automation software logistics features



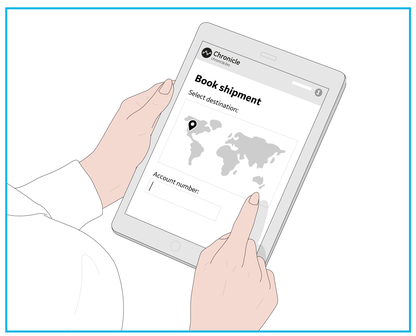
Chronicle software:
Provides a single digital space to monitor and record all cell therapy processing steps including shipments.



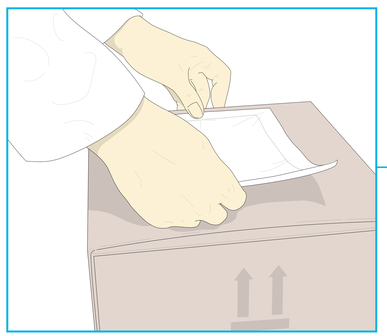
Standardize and verify processes as well as chain of custody:
eSOPs direct and record processes, for example loading samples and internal monitor into shipment container.
Recording bar code information from the container and sample labels allows the sample to be traced through every step captured within Chronicle.

Retain visibility of shipment throughout transit:
View container conditions and location in-real time whilst in transit with your chosen courier. Receive alerts if defined parameters are exceeded and as shipment progresses.

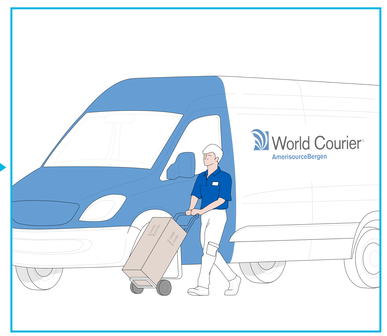
Complete electronic record:
Logistics data - chain of custody, monitoring, tracking and courier handling events* - combine with sample's manufacturing electronic batch record held within Chronicle



Book shipment directly with World Courier:
Contact World Courier and record your communication within Chronicle.



Simplify documentation:
World Courier shipment labels and documents are available through Chronicle and accessible to any permitted Chronicle user.



Logistics delivery and data:
World Courier manages collection, secure transport and delivery of the shipment.
*World Courier handling data logged in Chronicle.

Enhanced features for World Courier™ shipments

Ordering information

Product name	Product	Product code
