

Manual drug product filtration system

STERILE FILTRATION

Standardized hardware and single-use flow kits optimized for PUPSIT

The manual drug product filtration system (Fig 1) has been designed to meet *EU GMP Annex 1: Manufacture of sterile medicinal products*. In addition to the sterile filtration of drug product, it can manually perform pre-use post sterilization integrity testing (PUPSIT) of the sterilizing-grade filters, which is critical to a contamination control strategy. Using decades of experience in PUPSIT design, this ready-to-order PUPSIT solution includes both standardized hardware for consistent installation and standardized consumables for greater flexibility. By reducing the risk of incorrect installation and minimizing the time to implementation, our manual drug product filtration system allows you to meet EU GMP Annex 1 requirements with ease and confidence.

Key features and benefits

- Minimize risk of operator error with easy installation of single-use flow kits
- Reduce time to implementation with ready-to-order standardized hardware and consumables
- Movable valves accommodate a wide variety of single-use flow kits with different filter sizes and configurations

Leak and integrity testing

Integrity and leak testing ensure a defect-free single-use flow kit prior to committing the drug product. The manual drug product filtration system can perform an integrity test, before and after sterile filtration, with the Flowstar V integrity test instrument* using bubble point or forward flow (Fig 2). A leak test can be performed with the Flowstar V LGR integrity test instrument*. Other integrity testers can also be used if desired.

* Flowstar integrity test instruments are provided separately from the system.

Fig 1. Manual drug product filtration system.

Fig 2. Perform leak and integrity testing, before and after sterile filtration.

Minimized risk of incorrect installation

The shadow board graphic guides the operator to correctly install the single-use flow kit to minimize the risk of operator error (Fig 3). The filter holders and valves enable the flow kit to quickly be attached and secured to the shadow board. The flow kit can be installed onto the system in less than 20 min and uninstalled in less than 10 min.

Fig 3. Installation of flow kit with shadow board graphic guide.

Flexibility with movable valves and single-use flow kits

The manual drug product filtration system can fit a wide variety of single-use flow kits. The patented movable valves can be moved along the shadow board graphic (Fig 4) to accommodate flow kits with either small or large filter capsules (Fig 5). This filtration system also fits flow kits with single and redundant filter configurations.

The single-use filtration flow kits are available in a variety of sterilizing-grade membranes including Fluorodyne™ II DFL, Fluorodyne EX EDF, Supor™ EKV, Supor ECV, and Supor Prime membranes. Other membranes can be included upon request. Flow kits are offered with both Kleenpak™ Presto sterile connectors and AseptiQuik connectors. In addition to the single-use filtration flow kits, inlet, flush, and sampling flow kits are also available.

Fig 4. Movable valves can be positioned to fit the flow kit configuration.

Fig 5. Filtration system accommodates flow kits with different filter sizes and configurations.

Pressure monitoring

An integrated pressure transmitter and pressure sensors monitor pressure during sterilizing-grade filtration. Pressure monitoring can be used to detect over pressurization of the single-use flow kit and possible sterility breach (Fig 6). Up to three pressure sensors are included in the flow kit design. When the pressure in the flow kit reaches a specified limit, the pump automatically shuts off, if the pump is plugged into the skid. The e-stop can also deactivate the pump and integrity tester immediately if this equipment is plugged into the skid. An RS232 data logger connection is available to log pressure data from the pressure transmitter (Fig 7).

Fig 6. A Pendotech PMAT pressure transmitter and pressure sensors are integrated into the system. The e-stop will deactivate the pump and integrity tester if this equipment is plugged into the skid.

Minimized footprint

The compact design of the manual drug product filtration system allows it to easily fit into a cleanroom (Fig 8). The footprint is less than 1.1 m² and it can pass through a cleanroom door that is 0.9 m wide or larger. There is sufficient space on the skid to place a Watson Marlow 630 pump and a Flowstar V or Flowstar V LGR filter integrity test instrument. Other pumps and integrity testers can be used if desired.

Fig 8. Compact design allows easy fit into cleanroom.

Fig 7. RS232 data logger connection is available to log pressure data from the pressure transmitter.

Services

With over 30 years of experience in single-use design and integrity testing, we support end-users to confidently meet EU GMP Annex 1 requirements. Our service representatives and specialists are available to assist you as you navigate the challenges of implementing PUPSIT.

Technical specifications

Filtration configurations	Single Redundant (flow kits can have two different membranes if requested)
Minimum filter capsule size	Kleenpak KA02 capsule (200 cm ²) or equivalent
Maximum filter capsule size	Kleenpak Nova NP6 capsule (254 mm [10 in.]) or equivalent
Single-use flow path tube internal diameter (i.d.)	⅜ and ½ in. i.d. ¼ in. i.d. tubing at sampling flow kit
Dimensions (W × H × D)	893 × 1710 × 1100 mm
Weight (without accessories)	145 kg
Materials of construction	
Frame, shadow board, cabinet	Stainless steel 304
External finish	Ra ≤ 0.9 µm
Filter holders, valve plates	Nylon
Bag trays (LGRTPE20L)	High density polyethylene (HDPE) – polyethylene 500 (PE500)
Casters	Polypropylene (PE) and stainless steel
Environmental conditions	5°C to 25°C, relative humidity 10% to 70%, non-condensing
Filtration flow path operational pressure	0 to 3 bar dependent on filters installed Note: Remaining flow path pressure is dependent on chosen flow kits, contact us for detailed information.
Electrical supply	120 to 230 VAC, 50 or 60 Hz, 10 A
System power supply main plug	3-pin industrial plug Power connector plug blue 2P + E, 200 to 250 V/16 A, cable mounting IP44
Valve type	Manual pinch valves
Manual valves specification	IMI Norgren ½ and ⅜ in. i.d. Body: stainless steel 316L
Pressure transmitter specification	Pendotech PMAT3 Range: -0.48 to 5.20 bar Accuracy: ± 2% from 0 to 0.41 bar, ± 3% from 0.41 to 2.07 bar, ± 5% from 2.07 to 4.10 bar
Pump specification	Watson Marlow 630 pump Flow rate with ⅜ in. tubing: 0.18 to 440 L/h Flow rate with ½ in. tubing: 0.24 to 660 L/h

The single-use flow kits meet the following quality standards:

Single-use flow kits

USP <88> Class VI (ISO10993-6, -10, -11)	USP <88> Biological reactivity test <i>In Vivo</i> Class VI ISO10993 Biological evaluation of medical devices part 6, 10 and 11
Animal-derived component-free (ADCF)	A part is first-hand ADCF, or second-hand in compliance with EMA/4/410/01, or EP chapter 5.2.8 monograph 1483
21 CFR Part 177	FDA 21 Code of federal regulations (CFR) Part 177 Indirect food additives: polymers

Validation guide including extractables expectations and particulates claims is available on request.

Our manual drug product filtration system is built according to the following hardware quality standards:

System hardware

EU CE mark	EU declaration of conformity CE-marked-compliant with: <ul style="list-style-type: none"> • 2014/35/EU Low voltage directive (LVD) • 2014/30/EU EMC directive • 2012/19/EU WEEE (waste electrical and electronic equipment) directive • 2011/65/EU RoHS Directive to the EU/CE section
NRTL (UL/CSA) AS/NZS	Nationally recognized test laboratory for UL (Underwriters Laboratories) compliance for USA and Canada <ul style="list-style-type: none"> • Electrical safety • FCC 47 CFR Part 15B (ICES-003) • CISPR 11 Group 1 Class A
