Regarding: Use of Allergenic Substances

This statement is intended to provide information regarding the use of allergenic substances in the manufacture of Cytiva disposable pharmaceutical-grade filters, tangential flow filtration (TFF) cassettes, and single-use systems (SUS).

To the best of Cytiva's knowledge, the following substances are not intentionally used as direct materials of construction in the manufacture of the above-listed products:

- Celery (root, leaves, stalk; excluding seeds)
- Cereals containing gluten (e.g. wheat, rye, barley, oats, spelt, kamut, and their hybridised strains)
- Crustaceans
- Eggs and egg-derived products
- Fish and fish-derived products
- Lupin
- Milk and dairy-derived products
- Molluscs
- Mustard
- Peanuts and peanut-derived products
- Sesame seeds
- Soybeans and soy-derived products
- Tree nuts (including almond, Brazil nut, cashew, chestnut, filbert/hazelnut, hickory, macadamia, pecan, pine nut, pistachio, Queensland walnut, and walnut)
- Sulphur dioxide and sulphites at concentrations greater than 10 mg/kg or 10 mg/L, expressed as SO₂
-

While Cytiva does not expect these substances to be present, the raw materials used in the manufacture of these products are not certified as allergen-free. Therefore, Cytiva cannot completely exclude the possibility that trace quantities of allergenic substances may be present as incidental constituents originating from the raw material manufacturing process. Cytiva does not routinely test these products for the presence of allergenic substances.

Furthermore, the wetted components of these products are manufactured primarily from synthetic polymeric materials. As such, these products are not intended for direct food contact applications and are not considered food products or food ingredients under applicable food allergen labelling regulations.

Disclaimer: This statement is provided to the best of Cytiva's knowledge based on information available from suppliers and manufacturing processes at the time of issuance. No testing for allergenic substances is routinely performed unless otherwise stated.
