

Ficoll-Paque PREMIUM

Cell separation: pure and simple

Ficoll-Paque PREMIUM products

For over 40 years, Cytiva has been providing density gradient centrifugation media for the preparation of a wide variety of cell types and organelles used in research applications.

Developed from Ficoll-Paque™ PLUS, Ficoll-Paque PREMIUM products are available in a range of densities to suit your needs. These sterile, ready-to-use reagents can be used in clinical research and cell therapy manufacturing applications for the *in vitro* preparation of different density subsets of mononuclear cells from peripheral blood, umbilical cord blood, and bone marrow. They can also be incorporated into existing procedures where Ficoll-Paque PLUS is used. Mononuclear cell isolation can be automated and functionally closed by using Sepax™ technology (1, 2).

- Manufactured under a Quality Management System certified to ISO 13485
- Sterile, ready-to-use reagents for the preparation of mononuclear cells
- Easily transferable to existing protocols
- Low levels of endotoxin (< 0.12 EU/mL)

Ficoll-Paque PREMIUM

The original Ficoll-Paque PREMIUM has a density of 1.077 g/mL and is optimized for the isolation of mononuclear cells from human peripheral blood. The medium can also be used for the isolation of human mononuclear cells from other sources, including bone marrow and umbilical cord blood.

Ficoll-Paque PREMIUM 1.084

Ficoll-Paque PREMIUM 1.084 has a density of 1.084 g/mL and can be used for isolating higher-density human mononuclear cells, and for separating blood cells from mice or rats.

Ficoll-Paque PREMIUM 1.073

Ficoll-Paque PREMIUM 1.073 has a density of 1.073 g/mL and can be used when isolating lower-density human mononuclear cells, for example mesenchymal stromal cells or monocytes.
