Regarding: Use of Genetically Modified Organisms (GMOs)

This statement is intended to provide information regarding the use of genetically modified organism (GMO) substances in the manufacture of Cytiva disposable pharmaceutical-grade filters, tangential flow filtration (TFF) cassettes, and single-use systems (SUS).

Cytiva does not intentionally use or add GMO substances in the manufacture of the above-listed products. The wetted components of these products are primarily constructed from polymeric materials. However, as the raw materials supplied to Cytiva are not certified as non-GMO, Cytiva cannot categorically exclude the possibility that trace quantities of materials derived from genetically modified sources may be present as incidental constituents associated with the raw material manufacturing process.

Disclaimer: This statement is provided to the best of Cytiva's knowledge based on information available from our suppliers and manufacturing processes at the time of issuance.
